A; Cross-references: EMBL: X59753; NID: g38070; PIDN: CAA42425.1; PID: g38071
A; Note: parts of sequence, including amino ends of pepsinogen and activation C; Comment: This is a minor component of pepsin at all post-partum stages.
C; Comment: Although two-step activation is observerd, activation is predomina

SwissProt_40:*

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- CATALTYIC ACTIVITY: Broad specificity similar to clots milk by cleavage of a single bond in casein -!- ENZYME REGULATION: Inhibited by pepstatin.
-!- SUBUNIT: Monomer (By similarity).
-!- DEVELOPMENTAL STAGE: Expressed in adult, not neon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  evolution.";

                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: Shows particularly broad specificity; involving phenylalanine and leucine are preferralso cleaved to some extent.

CATALYTIC ACTIVITY: PREFERENTIAL CLEAVAGE PHE-, ENZYME REGULATION: Inhibited by pepstatin.

MISCELLANEOUS: The optimal pH is around 2.

SIMILARITY: BELONGS TO PEPFIDASE FAMILY AL; ALSO EUKARYOTIC ASPARTYL PROTEASES FAMILY.
                                                                                                                                                                                                                                                                                                                                                                     European Bioinformatics Institute.
